

3JP-A CATHODE-RAY TUBE

TENTATIVE

The Du Mont Type 3JP-A is an electrostatic focus and deflection cathode-ray tube. It is similar to the Type 3JP- with the exception of having closely controlled tolerances. Deflection factors are held to within 10%, with low pattern distortions. Angle alignment between the D1D2 and D3D4 traces is held to within 1°. Grid cut-off bias is held to within 25%.

CIRCUIT DESIGN VALUES

Focusing Electrode Voltage 200 to 345 Volts/Kilovolt of Accelerator Voltage
 Grid No. 1 Voltage 22.5 to 37.5 Volts/Kilovolt of Accelerator Voltage

Deflection Factors:

No Post Accelerator, or Post Accelerator Voltage = Accelerator Voltage
 D1 and D2 72 to 88 Volts D-C per inch per Kilovolt of Accelerator
 D3 and D4 53 to 65 Volts D-C per inch per Kilovolt of Accelerator
 Post Accelerator Voltage = twice Accelerator Voltage
 D1 and D2 90 to 110 Volts D-C per inch per Kilovolt of Accelerator
 D3 and D4 66.5 to 81.5 Volts D-C per inch per Kilovolt of Accelerator

MAXIMUM CIRCUIT VALUES

Grid No. 1 Circuit Resistance	1.5	Max. Megohms
Resistance in any Deflecting-Electrode Circuit ⁷	5	Max. Megohms

NOTES

1. Visual extinction of undeflected focused spot.
2. Measured in accordance with MIL-E-1B Specifications @ $I_{b3} = 100$ ua.
3. The deflection factor (for both D1D2 and D3D4 plate pairs, separately) for any deflection of less than 75% of the useful scan* will not differ from the deflection factor for a deflection at 25% of the useful scan* by more than the indicated value.
4. When the tube is operated at typical operating conditions ($E_h = 6.3$ V., $E_{b3} = 4000$ V., $E_{b2} = 2000$ V., E_{b1} at focus); E_{c1} adjusted to avoid damage to the screen; with each of the deflecting electrodes connected to the accelerator; and with the tube shielded against external influences, the spot will fall within a 3/16-inch radius circle, centered on the tube face.
5. All portions of a raster pattern adjusted so its widest points just touch the sides of a 2.104-inch square, will fall within the area bounded by the 2.104-inch square and an inscribed 2.021-inch square.
6. Deflection accuracy may be obtained by combining angle between traces, deflection factor uniformity and pattern distortion characteristics. In general, for deflections less than those indicated, the accuracy will improve.
7. It is recommended that the deflecting electrode circuit resistances be approximately equal.

* Useful scan is the area included within the useful screen diameter.
